SCOR Knowledge Management - I

Role:

Full-time development and deployment of enterprise-scale SCOR strategy for a process knowledge base including both structure and unstructured knowledge. Process Knowledge Management base should support improvements in SCOR program execution through process information quality and re-usability, improvements in strategic, tactical, and operational performance through rapid retrieval of key process information, and risk management through support of activities such as Sarbanes compliance.

Responsibilities:

- Development of a formal requirements-based enterprise SCOR knowledge management strategy including needs prioritization, tools and methods deployment for structured and unstructured knowledge management, testing and deployment planning, and change management execution.
- Interfacing with senior management to understand and characterize risk, cost, and complexity of process knowledge within the enterprise.
- Execution of a formal knowledge management program feedback / refinement program with diverse SCOR practitioner community at enterprise level.
- Planning and execution of formal research program for SCOR knowledge management methods and tools, and participation in internal or external research programs to enhance value of process knowledge management.
- Preparation of advice and opinion in departmental functions for the overall enhancement of SCOR deployment.

Desired Competencies

- Big-5 Consulting experience or similar
- Background in Finance, Science, Economics, Mathematics, or Engineering
- Formal certification in team development methods

Minimum Requirements:

- BS Degree or equivalent 4-year degree with emphasis in engineering
- Formal certification in Six-Sigma, TQM, SCOR, or other BPM Methodologies
- 2-4 years of experience in SCOR engagements
- 1-2 years of management experience
- Strong Verbal / Written Presentation Skills – experience in teaching, sales, or marketing
