SCOR Lead - II

Role:

Managing full-time development, implementation, and support of enterprise SCOR audit, development, and improvement programs and methodology through a controlled formal re-engineering and change-management approach.

Responsibilities:

- Interfacing with senior management to understand and characterize process issues and opportunities for resolving with SCOR programs.
- Development and execution from conception to deployment of business processes improvement initiatives, including program scoping, current-state capture, process analysis support, future-state design, and deployment planning, all within the context of departmental goals and timelines.
- Evolution of SCOR methodology including assessment of methodology relevance, utility, and efficiency.
- Preparation of advice and opinion in departmental functions for the overall enhancement of SCOR deployment.

Desired Competencies

- Big-5 Consulting experience or similar
- Background in Finance, Science, Economics, Mathematics, or Engineering
- Operational Management / Line Management experience
- Strong Verbal / Written Presentation Skills – experience in teaching, sales, or marketing
- Formal certification of expertise in a business domain, such as APICS for Supply-Chain, ITIL for IT

Minimum Requirements:

- BS Degree or equivalent 4-year degree with emphasis in engineering
- Formal certification in Six-Sigma, TQM, SCOR, CPIM, or other BPM-related Methodologies
- 4-6 years of experience in SCOR engagements
- 2-4 years Line/Operations Management experience
